EDUCATION

Florida International University (FIU)

Expected May 2027

Bachelor of Science in Computer Science, Minor in Business

GPA: 3.95 | Honors: Dean’s List (6X)

Relevant Coursework: Data Structures & Algorithms, Database Systems, Computer Architecture, Systems Programming, Object-Oriented Programming, Linear Algebra, Algorithms, Calc II, System Design, Intro to Cyber Security

SKILLS

Languages: Python, SQL, Java, HTML/CSS, C, JavaScript, Dart

Libraries/Frameworks: Pandas, NumPy, LangChain, TensorFlow, Flask, React, Next.js, Node.js, Django, Flutter, FastAPI

Tools: Git, VS Code, AWS S3, Tableau, Docker, MongoDB, PostgreSQL, Jupyter, Google Cloud

Methods: RESTful API Design, Unit & Integration Testing, Agile/Scrum, A/B Testing, CI/CD, Fullstack

PROFESSIONAL EXPERIENCE

Software Engineer Intern — Elerus AI

May 2025 – August 2025

AI-Powered Coding Platform

Miami, FL

- Built and shipped an AI-powered LeetCode-style platform using Python, React, and Gemini API by designing adaptive coding challenges with real-time AI feedback, enhancing practice workflows for 500+ active users
- Reduced code review turnaround by 40% by shipping 15+ RESTful APIs with unit and integration testing in an agile environment, improving system reliability and API performance across production rollouts

Software Engineering Intern – FIU Panther Soft

May 2025 – June 2025

FIU Panther Soft

Miami, FL

- Increased navigation efficiency by 35% for 50,000+ students by building a Flutter mobile app with real-time spatial data for location-based parking recommendations and a RESTful backend
- Engineered a multi-factor scoring algorithm using Node.js by **processing real-time data pipelines** (schedule, proximity, occupancy), lowering campus traffic congestion by 27% and cutting average time-to-park

Tech Fellow -- Google Tech Exchange

Jan 2025 – May 2025

Software Engineering & Generative AI

Remote

- Selected from a national pool of Black and Latinx engineers for Google's competitive Tech Exchange fellowship, receiving 1-on-1 mentorship from Google engineers across system design, algorithms, and generative AI application development
- Shipped a full-stack fitness and social media app on GCP using Streamlit, BigQuery, and Cloud Run, applying deployment best practices and data pipeline development at production scale

AI Fellow – Break Through Tech Cornell X Accenture AI Studio

May 2025 – Present

Accenture

Remote

- Selected from 1,000+ applicants for Cornell Tech's AI fellowship, completing 100+ hours of applied training in supervised learning, NLP, and model evaluation with responsible AI practices
- Improved fake news classification to 85%+ accuracy on 10,000+ articles by fine-tuning Hugging Face Transformers with tokenization, TF-IDF, and A/B testing across model variants (experimentation and validation)

PROJECTS

Severus AI — Interview Prep Platform

Fast API, React, LangChain, GPT4, Gemini

- Architected a full-stack AI mock interview platform using FastAPI and React by engineering LangChain multi-agent flows with GPT-4, delivering adaptive question generation and real-time feedback across 50+ mock sessions with sub-200ms latency
- Deployed on GCP using Cloud Run containerization by designing scalable RESTful API architecture with structured prompt engineering, achieving 75.9% uptime and dynamic difficulty adjustment based on user response quality
- Reduced API response time by 35% by implementing async request handling and response caching in FastAPI

PantherKolab — Collaborative Communication Platform

Next.js, AWS, WebSockets, OpenAI, React JS

- Developed a full-stack Slack and Zoom-style collaboration platform supporting 100+ users by implementing WebSocket-based real-time messaging, video communication, and community group channels on AWS, achieving sub-second message delivery.
- Increased productivity by 30% by integrating OpenAI-powered summarization, shared whiteboards, and an event planner into a unified real-time collaboration system

Smart Parking Assistant — FIU

Flutter, Dart, LLaMA 4.0, n8n, REST APIs

- Built an AI-powered Flutter mobile parking assistant by integrating LLaMA 4.0 for intelligent spot recommendations and n8n for workflow automation, processing real-time schedule, proximity, and lot availability data for 50,000+ FIU commuters
- Decreased redundant API calls by 40% and improved app responsiveness by 2x by creating a RESTful caching layer with n8n automation, maintaining consistent performance across iOS and Android

LEADERSHIP & EXTRACURRICULAR ACTIVITIES

Peer Tutoring

- STARS FIU — Student Teaching Assistant: Tutor 20+ students weekly in Python, Data Structures & Algorithms, and Database Management, improving core CS fundamentals and academic performance

Campus & External Organizations

- FIU Competitive Programming Team Co Lead: 3x ICPC USA Regional Competitor; deliver weekly algorithm lectures covering dynamic programming, graph theory, and data structures to team members
- INIT FIU & Women in Computer Science (WICS): Attended workshops on innovation and product design, and participated in hackathons applying industry insights to real-world project
- Break Through Tech Miami & ColorStack: Freshman Welcome Leader mentoring incoming students; active member of national communities supporting Black and Latinx CS students through career development and industry networking
