## EDUCATION

### Florida International University (FIU)

Expected Dec 2027

*Bachelor of Science in Computer Science, Minor in Business*

GPA: 3.95 | Honors: Dean's List (6X)

**Relevant Coursework:** Data Structures & Algorithms, Database Systems, Computer Architecture, Systems Programming, Object-Oriented Programming, Linear Algebra, Algorithms, Calc II, System Design, Intro to Cyber Security

---

## SKILLS

**Languages:** Python, SQL, Java, HTML/CSS, C, JavaScript, Dart

**Libraries/Frameworks:** Pandas, NumPy, LangChain, TensorFlow, Flask, React, Next.js, Node.js, Django, Flutter, FastAPI

**Tools:** Git, VS Code, AWS S3, Tableau, Docker, MongoDB, PostgreSQL, Jupyter, Google Cloud

**Methods:** RESTful API Design, Unit & Integration Testing, Agile/Scrum, A/B Testing, CI/CD, Fullstack

---

## PROFESSIONAL EXPERIENCE

### Accenture AI Fellow – Break Through Tech Cornell X Accenture AI Studio (Remote)

May 2025 – Present

- Selected from 1,000+ applicants for Cornell Tech's AI fellowship, completing 100+ hours of applied training in supervised learning, NLP, and model evaluation with responsible AI practices
- Improved fake news classification to 85%+ accuracy on 10,000+ articles by fine-tuning Hugging Face Transformers with tokenization, TF-IDF, and A/B testing across model variants (experimentation and validation)

### Software Engineering Intern – FIU Panther Soft (Miami FL)

May 2025 – June 2025

- Increased navigation efficiency by 35% for 50,000+ students by building a Flutter mobile app with real-time spatial data for location-based parking recommendations and a RESTful backend
- Engineered a multi-factor scoring algorithm using Node.js by **processing real-time data pipelines** (schedule, proximity, occupancy), lowering campus traffic congestion by 27% and cutting average time-to-park

### Google Tech Exchange | Software Engineering & Generative AI (Remote)

Jan 2025 – May 2025

- Selected from a national pool of Black and Latinx engineers for Google's competitive Tech Exchange fellowship, receiving 1-on-1 mentorship from Google engineers across system design, algorithms, and generative AI application development
- Shipped a full-stack fitness and social media app on GCP using Streamlit, BigQuery, and Cloud Run, applying deployment best practices and data pipeline development at production scale

---

## PROJECTS

### Severus AI — Interview Prep Platform | *Fast API, React, LangChain, GPT4, Gemini*

June 2026

- Architected a full-stack AI mock interview platform using FastAPI and React by engineering LangChain multi-agent flows with GPT-4, delivering adaptive question generation and real-time feedback across 50+ mock sessions with sub-200ms latency
- Deployed on GCP using Cloud Run containerization by designing scalable RESTful API architecture with structured prompt engineering, achieving 75.9% uptime and dynamic difficulty adjustment based on user response quality
- Reduced API response time by 35% by implementing async request handling and response caching in FastAPI

### PantherKolab — Collaborative Communication Platform | *Next.js, AWS, WebSockets, OpenAI, React JS*

January 2026

- Developed a full-stack Slack and Zoom-style collaboration platform supporting 100+ users by implementing WebSocket-based real-time messaging, video communication, and community group channels on AWS, achieving sub-second message delivery.
- Increased productivity by 30% by integrating OpenAI-powered summarization, shared whiteboards, and an event planner into a unified real-time collaboration system

### NeuroScan — Brain Tumor Detection Platform | *PyTorch, MONAI, 3D ResNet-18, Fast API, Grad-CAM*

Dec 2025

- Won 1st place at the AI4ALL Student Symposium by developing a 3D ResNet MRI detection system with 83.7% recall using volumetric augmentation, class weighting, and metric-driven model optimization.
- Deployed a production-ready FastAPI inference service on Vercel, processing 3D MRI scans in under 3 seconds with interpretable Grad-CAM visualizations for accurate tumor localization.

---

## CAMPUS LEADERSHIP & EXTRACURRICULAR ACTIVITIES

- Student Teaching Assistant:** Tutor 20+ students weekly in Python, DSA, and Databases, improving CS fundamentals
- Team lead FIU Competitive Programming :** 3x ICPC USA Regional Competitor; lead weekly lectures on algorithms and DS
- INIT FIU & Women in Computer Science (WICS):** Participated in innovation workshops and hackathons focused on real-world software development.
- Break Through Tech Miami & ColorStack:** Freshman Welcome Leader mentoring incoming students; active member of national communities supporting Black and Latinx CS students through career development and industry networking
